Installation of Software / Driver for K8061 or VM140 on Windows 10 32 – 64 Bit.**Installation Guide:**

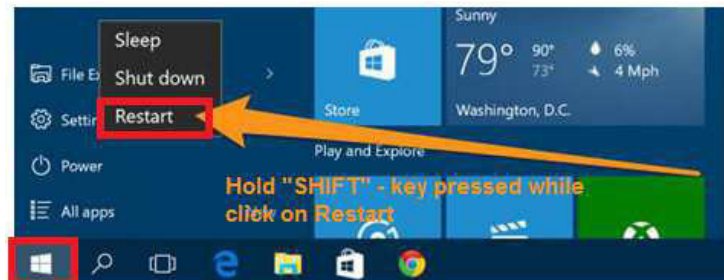

- 1) Download the latest software from this our site:
https://www.velleman.eu/downloads/files/downloads/k8061_driver_v4_0.zip

Please install with full Administrator privileges and click on "Install this driver software anyway" if you get a pop-up that Windows cannot verify the publisher of the driver.

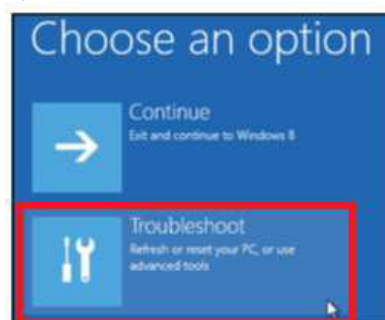

- 2) Unzip (extract) the downloaded setup file.
- 3) Then connect the K8061 onto USB port. **Note** do not use an **USB 3.0** port (blue port).
Then Power on the K8061 via 12V DC adaptor.
- 4) Install the driver for K8061.
 - a. To install the driver, you **must disable the driver signature enforcement**.
To do so, reboot the computer in special mode called: **"disable driver signature enforcement"**

A guide how to do: Here you will find the instructions how to disable driver signature enforcement in Windows 10: We prefer to use option 2. [How to Disable Driver Signature Verification on 64-Bit Windows 8 or 10 \(So That You Can Install Unsigned Drivers\) \(howtogeek.com\)](#)

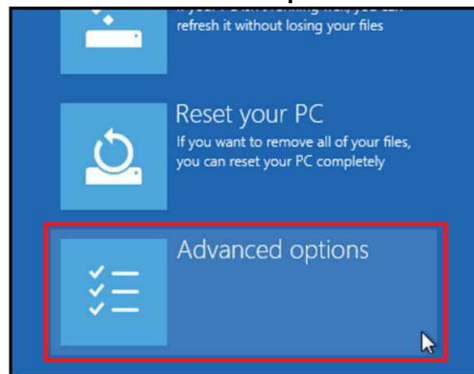

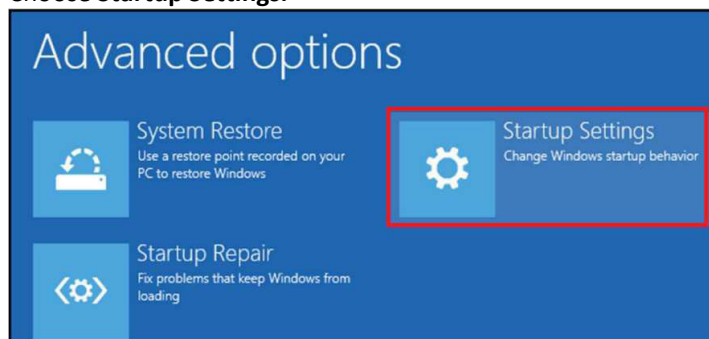

Hold shift key pressed while you click on "Restart".

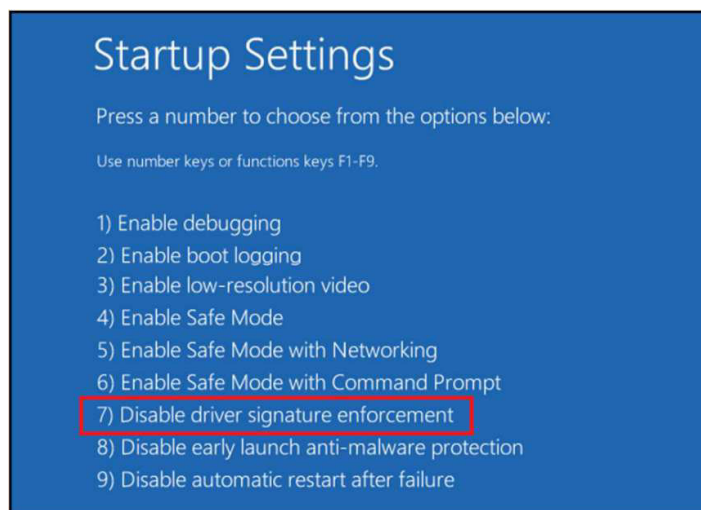

- b. Once your computer has rebooted, you will be able to choose the **Troubleshoot** option.

February 24, 2021

c. Now choose **Advanced options**.d. Choose **Startup Settings**.

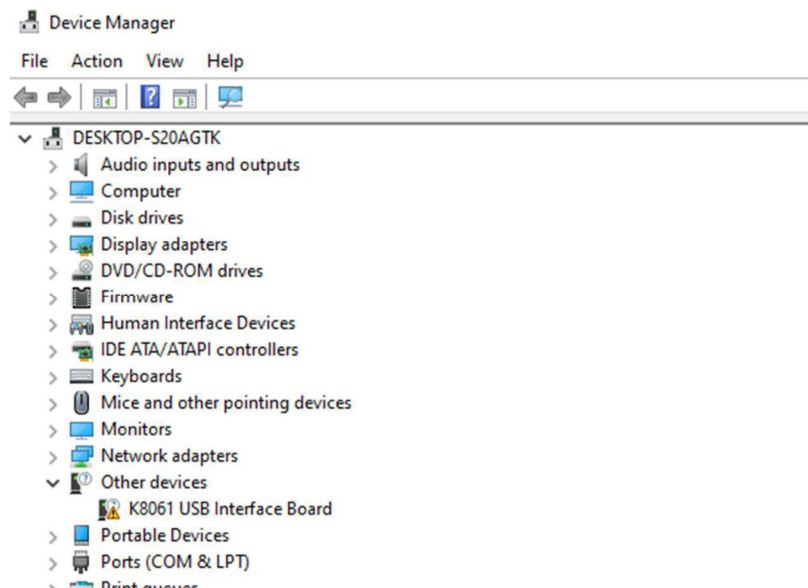

Since we are modifying boot time configuration settings, you will need to restart your computer one last time. Finally, you will be given a list of startup settings that you can change. The one we are looking for is **“Disable driver signature enforcement”**. To choose the setting, you will need to **press the F7 function key**.

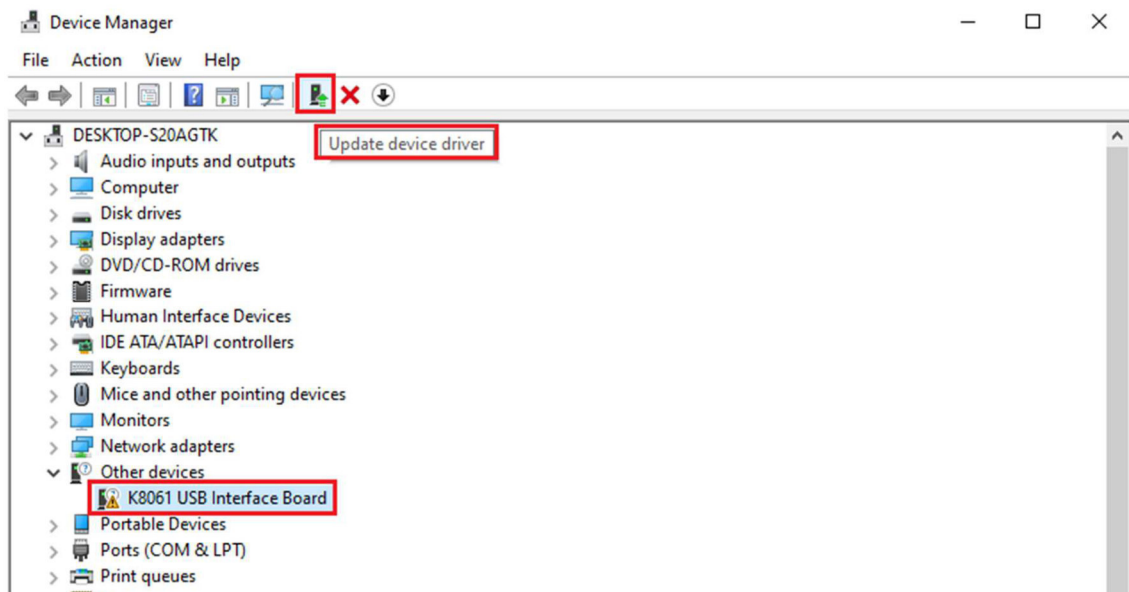

Your PC will now reboot one more time and you will be able to install unsigned drivers without any error message.
