

Congratulations on the purchase of your Signum IoT Gateway!
Please follow these instructions to install and configure your Signum.

1. Mount & connect your Signum:

- Connect the provided Molex cable to your Signum & Velbus installation.

- Connect the Signum with an ethernet cable to your home network.
- Check if the PS LED is green & the STAT LED is blinking green.
- Write down your Signum ID.

Finish & set up your Velbus installation before configuring your Signum!

2. Press the RMT button (CH1) on the top left of the module.

3. Connect to your Signum via **VelbusLink** or the **Velbus Signum App**

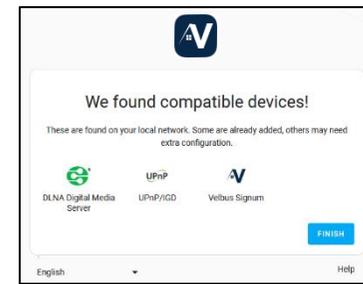

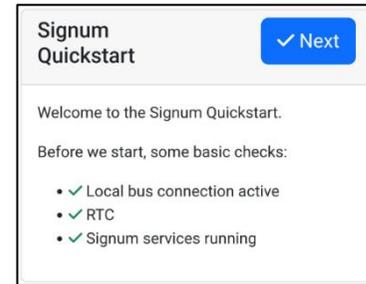

velbus.eu/downloads

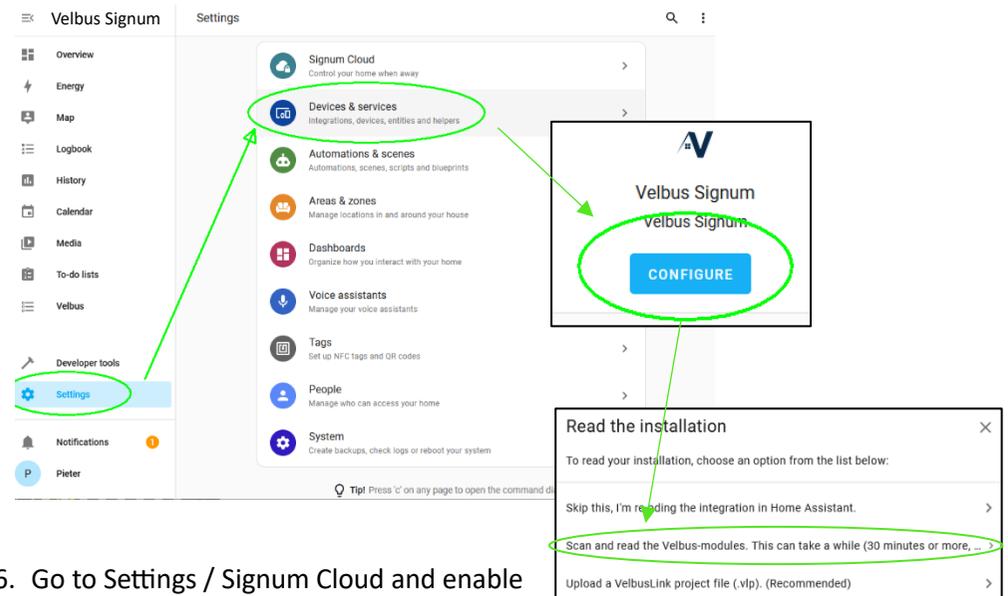

If you cannot find your Signum, check if you are connected to the same network as your Signum and if the RMT LED (CH1) on the module is turned on.

4. Follow the instructions of the Signum QuickStart guide.

5. Now go to Settings / Devices & services in your Home Assistant and press 'Configure' Velbus. You will need to scan and read your installation.

6. Go to Settings / Signum Cloud and enable remote access (optional).

You can now harness the full power of your Velbus installation alongside smart services, all from the convenience of your smartphone!
